

## Why Us

### Standards Compliant

Panthers Concrete Tanks are constructed to meet Australian Quality Standards including AS3735 - Concrete Structures for Retaining Liquids and AS3600 - Concrete Structures.

### Australia Wide Service

No matter where your site is located, Panthers Concrete Tanks team will travel Australia wide to bring you our unrivalled quality and service.

### Rapid Construction Turnaround

Completion time for most Residential size tanks (up to 170,000 litres) can be within 3 days (weather permitting) including the roof.

### 25 Years Experience

Panthers Concrete Tanks have been building Concrete Tanks for Residential and Commercial use for over 25 years.

### High Quality Construction

All Tanks are constructed in one operation and reinforced with heavy high tensile steel. The tanks are constructed with vibrated concrete.

### Unrivalled Strength

Panthers Concrete Tanks are constructed to last due to the thicker, steel reinforced walls and roof, along with internal columns to ensure your tank stands the test of time.

### Below or Above Ground

Tanks can be constructed above ground or totally hidden when constructed below ground. Below ground tanks are constructed with manhole and riser to ground level.

### Obligation Free Quotes, Site Inspection and Advice

We can arrange for one of our highly qualified consultants to visit your site to discuss your needs and provide a site inspection and obligation free quote.
